Machine Learning

Interesting Findings

Bookings in the summers increased for both cities

Host verification does not affect number of bookings

A higher rating resulted in a greater number of bookings

Growth Rates in bookings for both cities decrease over the years

Amsterdam growth rate decreases in a steeper manner than New York, hence tourism to be greater in New York in the future

Learning Outcomes

How to group a large amount of data by multiple features to get the required result

How to merge and join two separate data frames

How to explore and analyze data using different graphs such as line graphs, bar graphs and scatterplots

Basic application of machine learning

Thank You!
